

NANOMYTE® MEND 2000-UVP

NANOMYTE® MEND 2000-UVP is a solventborne, self-healing coating with UV protective properties, that heals at room temperature. The 2-part coating involves a unique phase-separated morphology that facilitates the delivery of the self-healing agent to the damage site (such as a scratch or crack) thereby restoring the coating appearance & function. When scratched or damaged, the coating's self-healing function initiates at room temperature ($\geq 25^{\circ}\text{C}$), and can be accelerated with the application of heat. MEND 2000-UVP is enhanced with NEI's UV-Protect (UVP) technology, which blocks UV radiation and protects coated surfaces from the harmful effects of sun and weather exposure. The addition of UVP helps maintain the unique properties of the coating when subjected to long-term outdoor exposure, while preserving the underlying material's strength, coating adhesion, and appearance.

Physical Characteristics

Composition:	2k polyurethane with proprietary additives
Color:	Clear, colorless (as supplied; pigmented versions available upon request)
Gloss (20°/60°):	88 GU/ 92 GU
Pot Life:	> 3 hours
Viscosity:	Not available
Curing Temperature:	60°C (minimum)
Self-healing Temperature:	25°C (minimum); > 40°C (recommended)
Solvent:	Toluene
Catalyst:	Tin
Mixing Ratio (A:B):	1:1 (by weight)
Solids Content:	33 – 36%
Dry Film Thickness (DFT):	1.5 mils (minimum recommended)
Weatherability:	1000 hours (minimum, DFT = 2 mils) by ASTM D4587 (G154, Cycle 1)

Application Instructions

1. Combine 1 part (by weight) of Part A with 1 part of Part B (both components are included with purchase)
2. Mix thoroughly until homogeneous and apply promptly (preferably within 2 hours)
3. Once applied, transfer coated part to preheated oven within 5 minutes
4. Recommended curing schedule: 80°C for 15 minutes, followed by 120°C for 1 hour

Customization

- Viscosity may be adjusted by diluting with MEND Reducer; contact NEI if a higher viscosity is desired
- Tints and pigments are available, contact NEI for further information
- DTT (dry-to-touch) time may be reduced with the addition of MEND catalyst. This will also reduce pot life.

Application Notes

- Self-healing is initiated at room temperature ($\geq 25^{\circ}\text{C}$) and is accelerated at higher temperatures ($> 40^{\circ}\text{C}$).
- Avoid extended exposure to temperatures in excess of 140°C.
- Depending on film thickness and curing conditions, properties such as hardness and solvent resistance, may continue to develop over a period of days to weeks.

Storage and Handling

Precautions for Safe Handling

Appropriate personal protective equipment should be used at all times. Provide good ventilation or extraction. Avoid contact with eyes, skin, and clothing. Avoid prolonged or repeated breathing of vapor. Wash hands thoroughly after handling. Keep away from heat, sparks, flames, and other sources of ignition.

Refer to SDS for complete information on the safe handling of this product.

NANOMYTE® MEND 2000-UVP

Conditions for Safe Storage

- PART A:** Avoid contamination with incompatible materials. Keep away from heat, sparks, flames and other sources of ignition. Residual vapors might explode on ignition. Do not apply heat, cut, drill, and grind or weld on or near this container.
- PART B:** Keep container tightly sealed. Store at room temperature in a dry place. Keep away from sources of ignition. Protect from cold temperatures (< 60°F). Gelation as a result of low temperature exposure may be reversed by warming to ~100°F for several hours. Purge container with dry, inert gas after use.
- NOTE – Components should be stored separately until ready to use. Once mixed, coating solution should be used within the time allotted (see pot life).**

Available Quantities

NANOMYTE® MEND 2000-UVP is sold and shipped directly from NEI in liter or gallon quantities (components A & B are included with purchase). Bulk quantities and customized versions of our MEND coatings are available upon request – contact NEI for details.

Additional Information

WARNING: This product should not be used, stored, or transported until all handling precautions and recommendations stated in the Technical Data Sheet (TDS) and Safety Data Sheet (SDS) for this coating are understood. Exposure should be minimized and direct contact should be avoided through the observance of proper precautions, use of appropriate engineering controls, and proper personal protective clothing and equipment.

NEI Corporation believes that the information in this technical data sheet is an accurate description of the typical use of the product. However, NEI disclaims any liability for incidental or consequential damages, which may result from the use of their products that are beyond its control. Employers should use this information only as a supplement to other information gathered by them and should make independent judgment of suitability of this information to ensure proper use and protect the health and safety of employees. Therefore, it is the user's responsibility to thoroughly test the product in their particular application to determine its performance, efficacy, and safety. Nothing contained herein is to be considered as permission or a recommendation to infringe any patent or any other intellectual right.
